## Introduction

The SHMPAT desired to make **Section 3: State Risk Assessment** more concise and focused. As such, many of the tables with data for each county, and often multiple values for each county, have been summarized through text or graphics in the body of **Section 3: State Risk Assessment**. The in-depth tables and data that support the text and graphics are found in this appendix.

## Table C.15 Category 2 Hurricane Winds, Count of Structures

Table C.15 indicates the number of structures by occupancy type that would be affected by a Category 2 hurricane, based on the return period indicated and probability of occurrence. The classification of the winds into Category 2 is based on wind speeds from the peak gusts wind layer for Florida from HAZUS- MH 2.1.<sup>14</sup>

## Table C.17 Category 5 Hurricane Winds Hazard, Count of Structures

Table C.17 indicates the number of structures by occupancy type that would be affected by a Category 5 hurricane, based on the return period indicated and probability of occurrence. The classification of the winds into Category 5 is based on wind speeds from the peak gusts wind layer for Florida from HAZUS-MH 2.1.<sup>16</sup>

## Table C.19 Category 2 Hurricane Return Periods, Count of County Facilities

Table C.19 displays the number of county facilities by type that are located in the geographic areas that are expected to be affected. This breaks down to those areas which would be affected every 20, 50, 100, 200, or 500 years by a Category 2 hurricane.<sup>18</sup>

## Table C.21 Category 5 Hurricane Return Periods, Count of County Facilities

Table C.21 displays the number of county facilities, by type, located in the geographic areas that are expected to be affected. This breaks down to those areas that would be affected every 200, 500, or 1,000 years by a Category 5 Hurricane.<sup>20</sup>
