SFWMD Data Catalog

2007 Broward 10-ft DEM, v1

Overview

Unique ID: 2112

Title: 2007 Broward 10-ft DEM, v1

Description: This raster dataset is a 10-ft digital elevation model (DEM) of bare earth for eastern portions of Broward County, as well as relatively small portions of southern Palm Beach County and northern Miami-Dade County. Elevation values are in feet, NAVD 1988. The DEM was created using data from the 2007 Florida Division of Emergency Management (FDEM) Statewide Coastal LiDAR project (Delivery Block 6, flown between Jul and Dec 2007). It was prepared to support business functions that benefit from terrain elevation surfaces for which the accuracy and other characteristics of this dataset are deemed appropriate by the DEM end user. DEMs are commonly used in the District for modeling, visualization and analysis.

Theme Keywords: topography, topographic, digital elevation model, DEM, digital terrain model, DTM, LiDAR, elevation, terrain, bare earth surface, altitude, height, hypsography

Place Name Keyword: elevation, imageryBaseMapsEarthCover

Source Organization: South Florida Water Management District (SFWMD)

Data Type: GRID

Abstract

2007 Broward 10-ft DEM in NAVD 1988, Release Version 1. This is a raster dataset, representing a 10-ft digital elevation model (DEM) of bare earth for eastern portions of Broward County, as well as relatively small portions of southern Palm Beach County and northern Miami-Dade County. Elevation values are in feet, NAVD 1988. The DEM was created using deliverables from the 2007 Florida Division of Emergency Management (FDEM) Statewide Coastal LiDAR project, authorized by the Florida House Bill (HB) 7121 - Disaster Preparedness Response and Recovery. For this specific DEM, SFWMD used the last known set of accepted vendor deliverables from FDEM's delivery block 6, composed of 527 tiles. Each tile is sized 5000-ft by 5000-ft, therefore the project area is ~ 473 sq mi.
