

# COVID-19: summary of persons monitored, persons tested, and cases

Data through Oct 17, 2020 verified as of Oct 18, 2020 at 09:25 AM

Data in this report are provisional and subject to change.

Monitored persons: people the Florida Department of Health was notified of for possible monitoring because they are a contact of a case, traveled from China, or were identified by the Centers for Disease Control and Prevention (CDC) as a part of a airline/ship contact investigation

<b>Total reports</b>	<b>312,878</b>
Total persons of high, medium, or unknown risk	309,240
High/medium/unknown risk still being monitored	24,807

Persons tested: includes PCR and antigen test results received by the Department of Health from the state public health laboratory (BPHL), as well as commercial and hospital laboratories

	Florida residents	Non-Florida residents
Total tested	5,707,334	22,300
Positive	745,492	9,528
Negative	4,954,649	12,723
Inconclusive	7,193	49

## Cases: people with positive PCR or antigen test result

<b>Total cases</b>	<b>755,020</b>
Florida residents	745,492
Non-Florida residents	9,528

<b>Type of testing</b>	
Florida residents	745,492
Positive by BPHL/CDC	26,803
Positive by commercial/hospital lab	718,689
PCR positive	721,118
Antigen positive	24,374
Non-Florida residents	9,528
Positive by BPHL/CDC	278
Positive by commercial/hospital lab	9,250
PCR positive	8,824
Antigen positive	704

<b>Characteristics</b>	
Florida residents hospitalized	47,053
Florida resident deaths	15,967
Non-Florida resident deaths	201

Hospitalized counts include anyone who was hospitalized at some point during their illness. It does not reflect the number of people currently hospitalized.

More information on deaths identified through death certificate data is available on the National Center for Health Statistics website at [www.cdc.gov/nchs/nvss/vsrr/COVID19/index.htm](http://www.cdc.gov/nchs/nvss/vsrr/COVID19/index.htm).

## Risk factors for Florida residents

Traveled	6,515
Contact with a known case	278,608
Traveled and contact with a known case	6,957
Neither	453,412
No travel and no contact	98,225
Travel is unknown	247,507
Contact is unknown	196,120
Contact is pending	139,148

Travel can be unknown and contact can be unknown or pending for the same case, these numbers will sum to more than the "neither" total.

# COVID-19: cases and laboratory testing over time

Data through Oct 17, 2020 verified as of Oct 18, 2020 at 09:25 AM

Data in this report are provisional and subject to change.

## Cases in Florida residents per day for the past 2 weeks

### Number of cases per day

### Median age of cases by day

## Laboratory testing for Florida residents over the past 2 weeks

### Number of Florida residents tested per day

These counts include the number of people for whom the Department received PCR or antigen laboratory results by day. People tested on multiple days will be included for each day a new result was received. A person is only counted once for each day they are tested, regardless of whether multiple specimens are tested or multiple results are received.

### Number and percent of Florida residents with positive test results

The percent of positive results ranged from 4.42% to 9.23% over the past 2 weeks and was 5.94% yesterday.

These counts include the number of people for whom the Department received PCR or antigen laboratory results by day. People tested on multiple days will be included for each day a new result was received. A person is only counted once for each day they are tested, regardless of whether multiple specimens are tested or multiple results are received. If a person has a positive specimen and a negative specimen in the same day, only the positive result is counted.

### Percent positivity for new cases in Florida residents

The percent of positive results ranged from 3.43% to 7.87% over the past 2 weeks and was 4.68% yesterday.

This percent is the number of people who test PCR- or antigen-positive for the first time divided by all the people tested that day, excluding people who have previously tested positive.

\* A data dump of previously reported lab results prevented the reporting system from normal processing of lab results on Oct 9, causing an inaccurate representation of data for Oct 9 and 10. The most accurate way to interpret percent positivity for these 2 days is as a 2-day average, which was 4.21%.

# COVID-19: characteristics of 745,492 Florida resident cases

Data through Oct 17, 2020 verified as of Oct 18, 2020 at 09:25 AM

Data in this report are provisional and subject to change.

# COVID-19: testing by laboratory

Data through Oct 17, 2020 verified as of Oct 18, 2020 at 09:25 AM

Data in this report are provisional and subject to change.

The numbers in the table below represent the number of Florida and non-Florida residents for whom test results were received by the Department of Health. A person can be tested by more than one laboratory and can have both positive and negative results. **Therefore, the sum of the numbers in each column will be larger than the total number of people tested.**

Reporting lab	Inconclusive	Negative	Positive	Percent positive	Total

# COVID-19: testing by laboratory

Data through Oct 17, 2020 verified as of Oct 18, 2020 at 09:25 AM

Data in this report are provisional and subject to change.

The numbers in the table below represent the number of Florida and non-Florida residents for whom test results were received by the Department of Health. A person can be tested by more than one laboratory and can have both positive and negative results. **Therefore, the sum of the numbers in each column will be larger than the total number of people tested.**

# COVID-19: testing by laboratory

Data through Oct 17, 2020 verified as of Oct 18, 2020 at 09:25 AM

Data in this report are provisional and subject to change.

The numbers in the table below represent the number of Florida and non-Florida residents for whom test results were received by the Department of Health. A person can be tested by more than one laboratory and can have both positive and negative results. **Therefore, the sum of the numbers in each column will be larger than the total number of people tested.**
